

Electric shock to the supply chain

Charging up battery

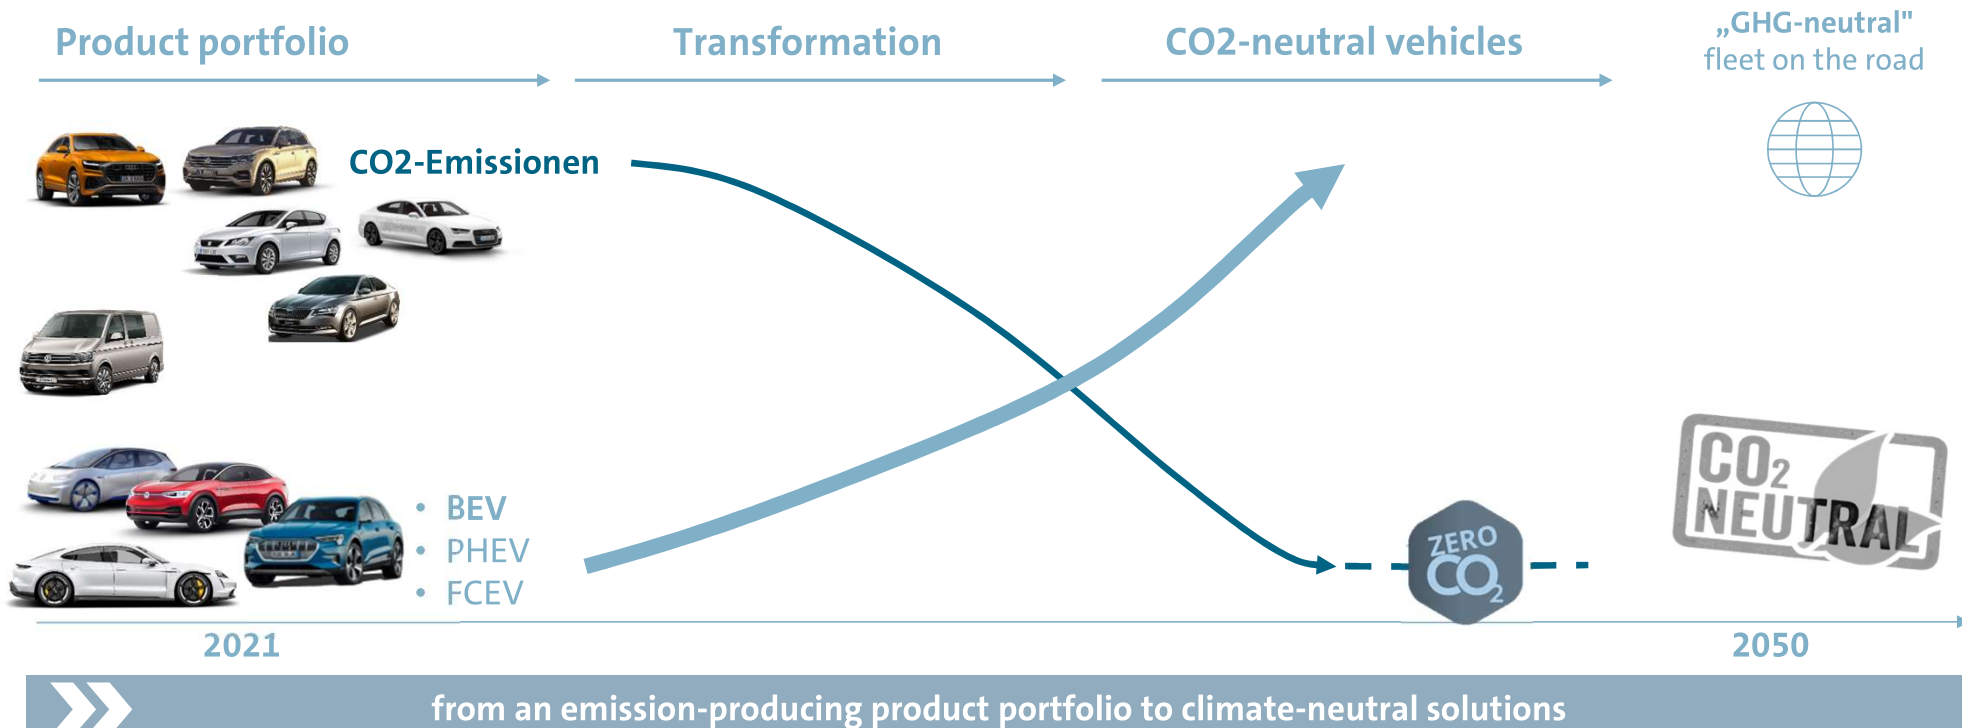

Matthias Braun, Head of Battery Cell Logistic VW Group
@Automotive Logistics & Supply Chain Europe 2022

Vertraulichkeitsklasse: PUBLIC

1. VW road to a climate-friendly future

Where're we come from - where we're heading to

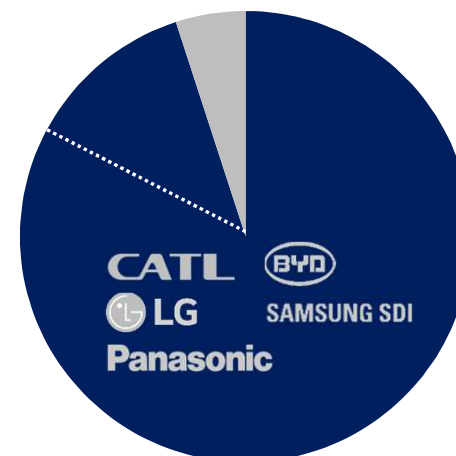

„CLIMATENEUTRAL" MOBILITY: UN PARIS AGREEMENT: IMPACT AND TRANSFORMATION

2. Make or buy?

The reason for building a network of battery system producing plants

the battery system accounts for
40% of vehicle costs

>95% of the market is
covered by Asian players

The battery system accounts for the largest part of value added share of e-vehicles

3. Decision: Make!

6 gigafactories will be built in europe

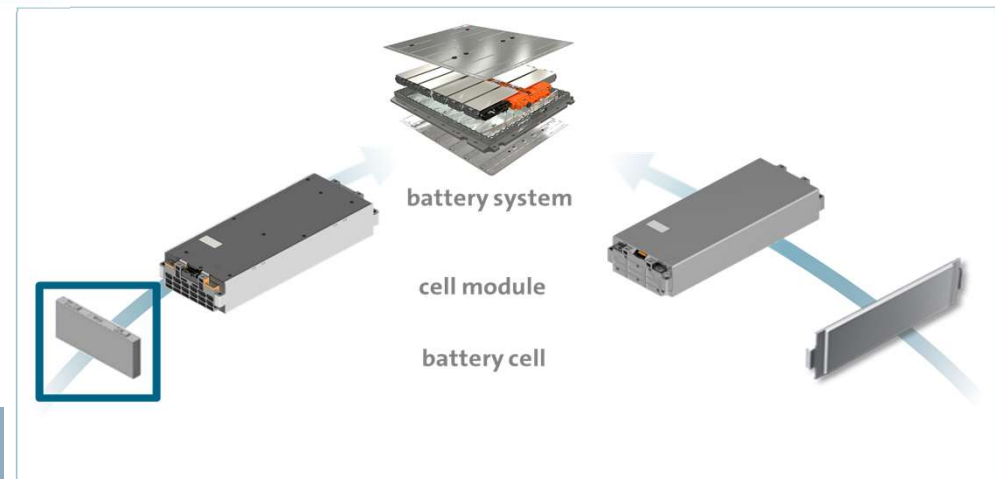

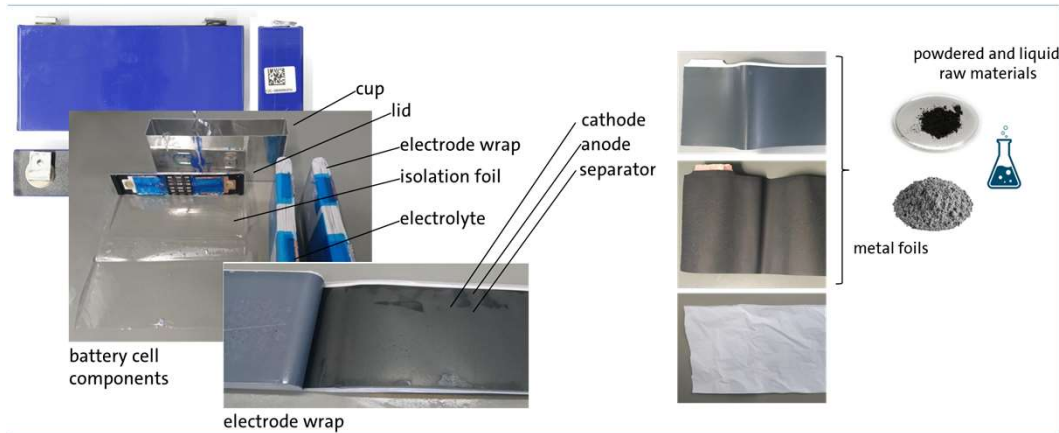

= 240 GWh bis 2030

More to come...

4. Deep Dive

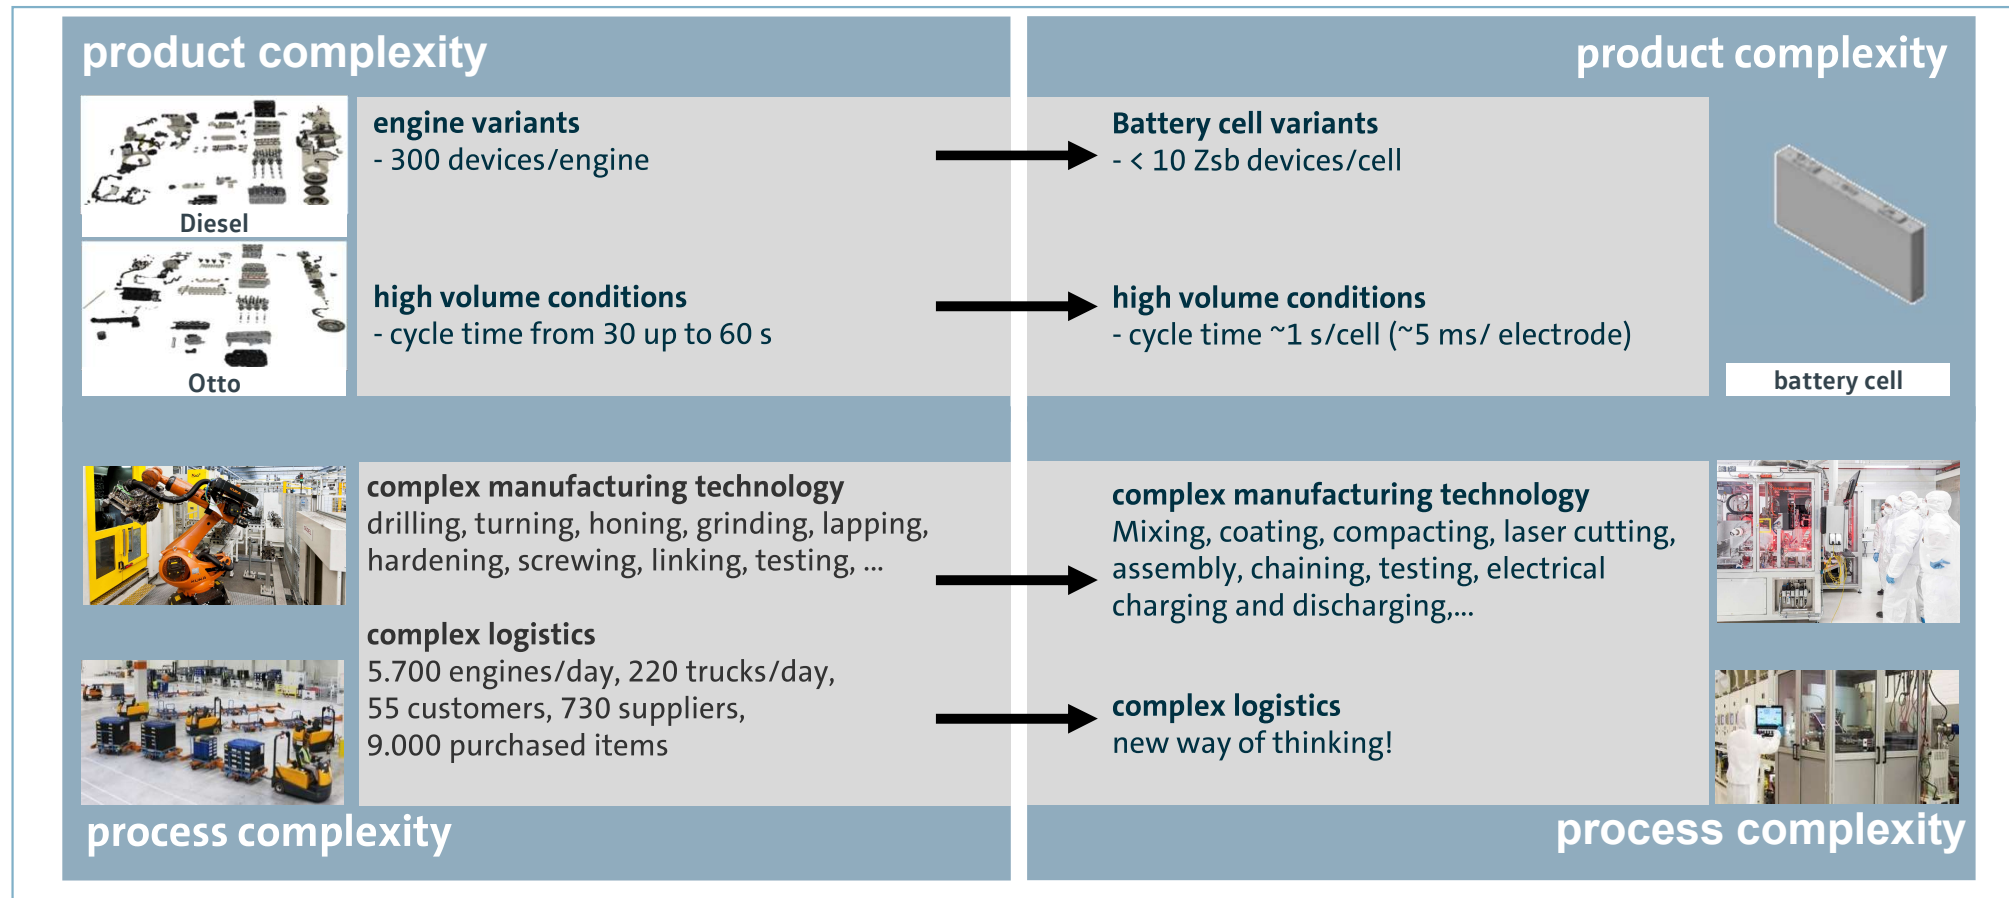

The battery cell as part of a new holistic value chain for the drive system in the vehicle

completely new requirements for logistics

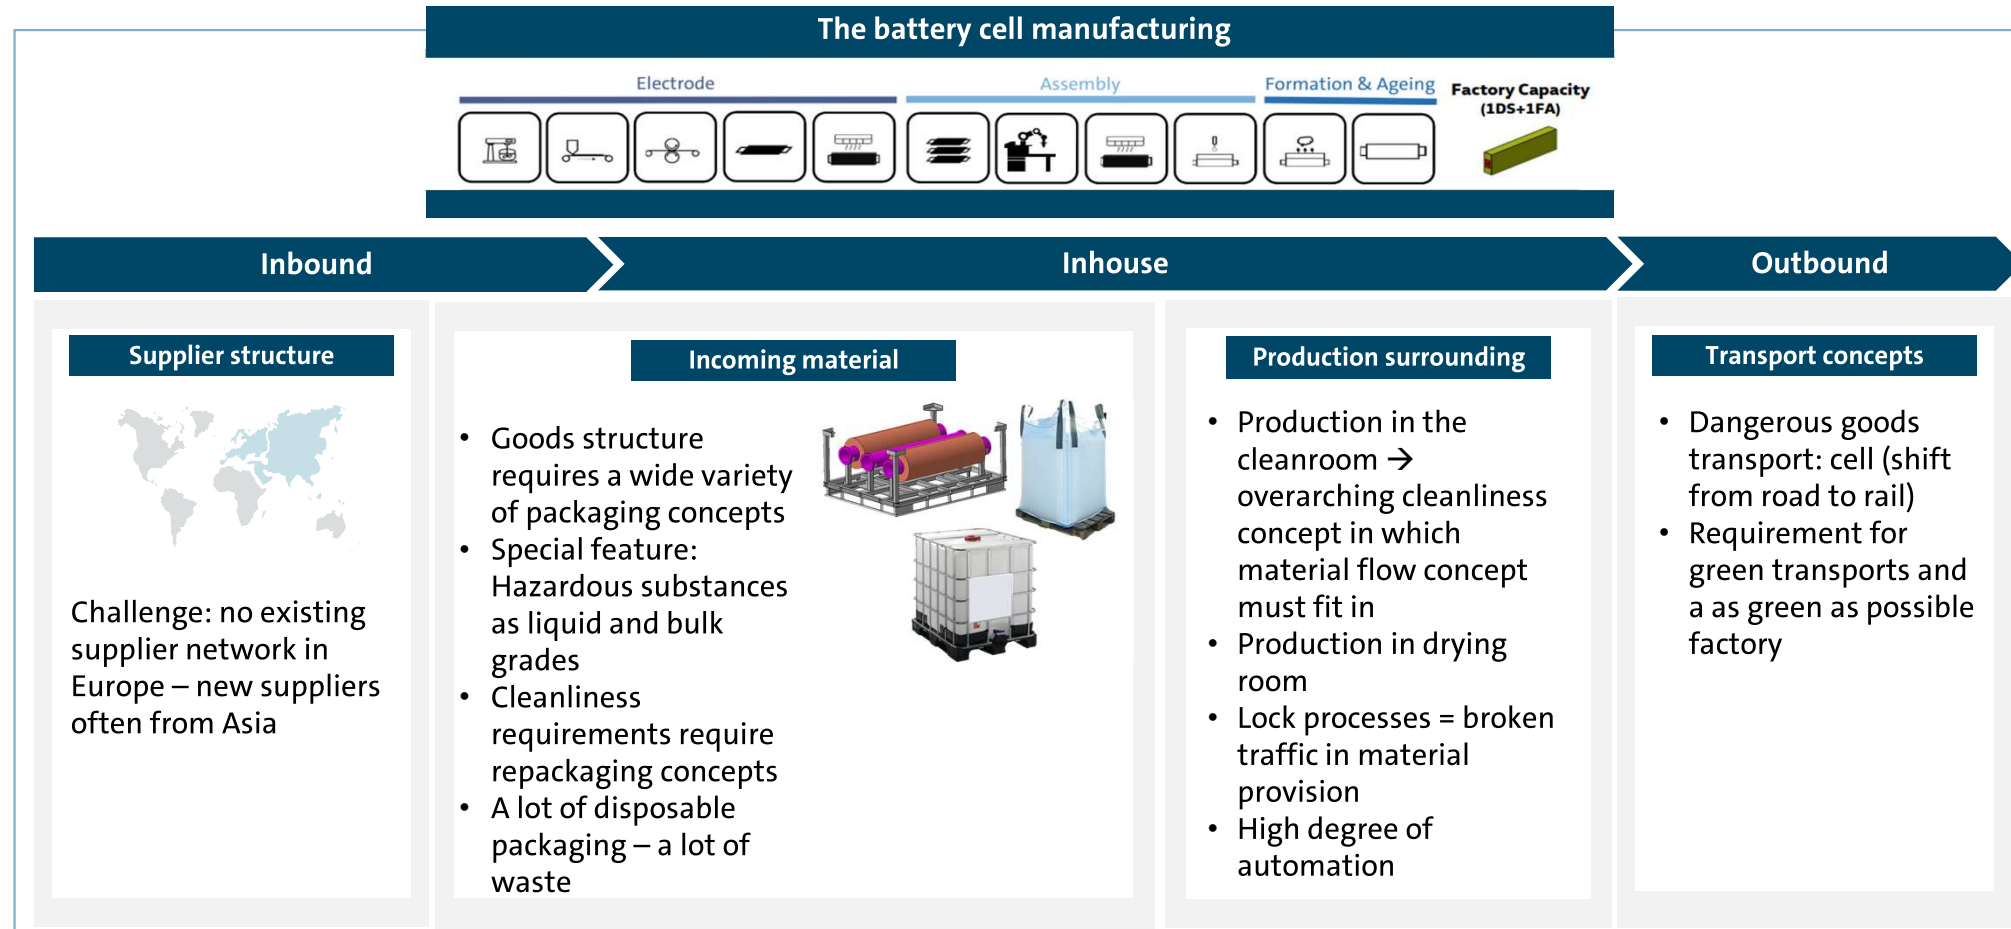

5. What's changing?

Complexity of engine and battery cell logistics of the Salzgitter plant

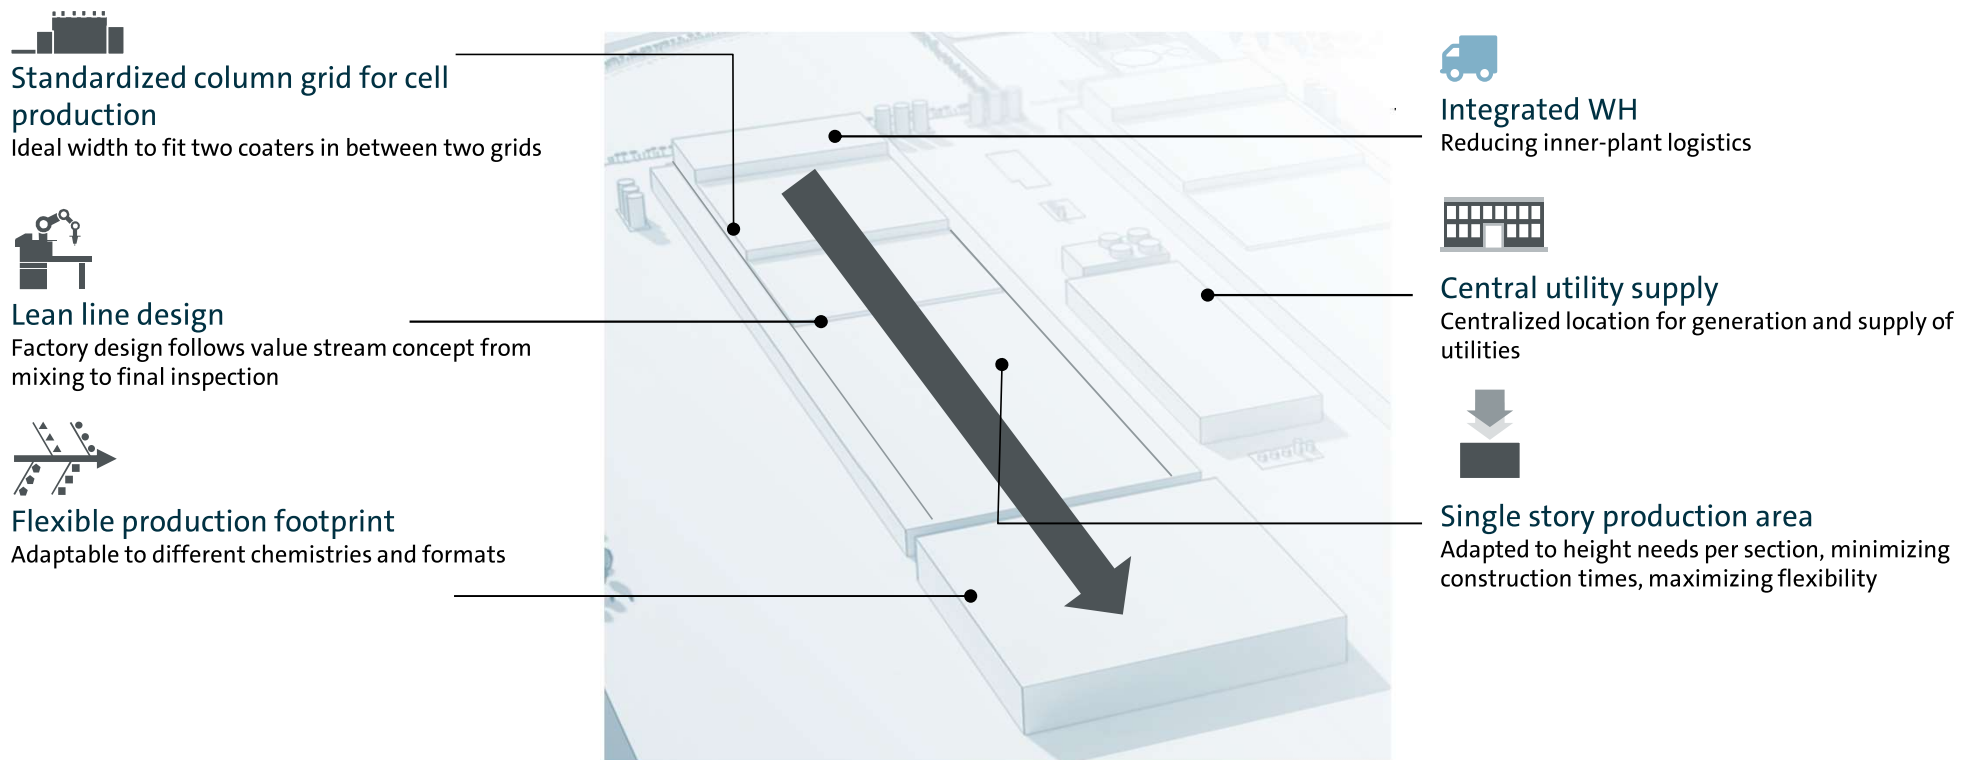

6. Lets talk logistics

Logistical challenges along the battery cell value chain

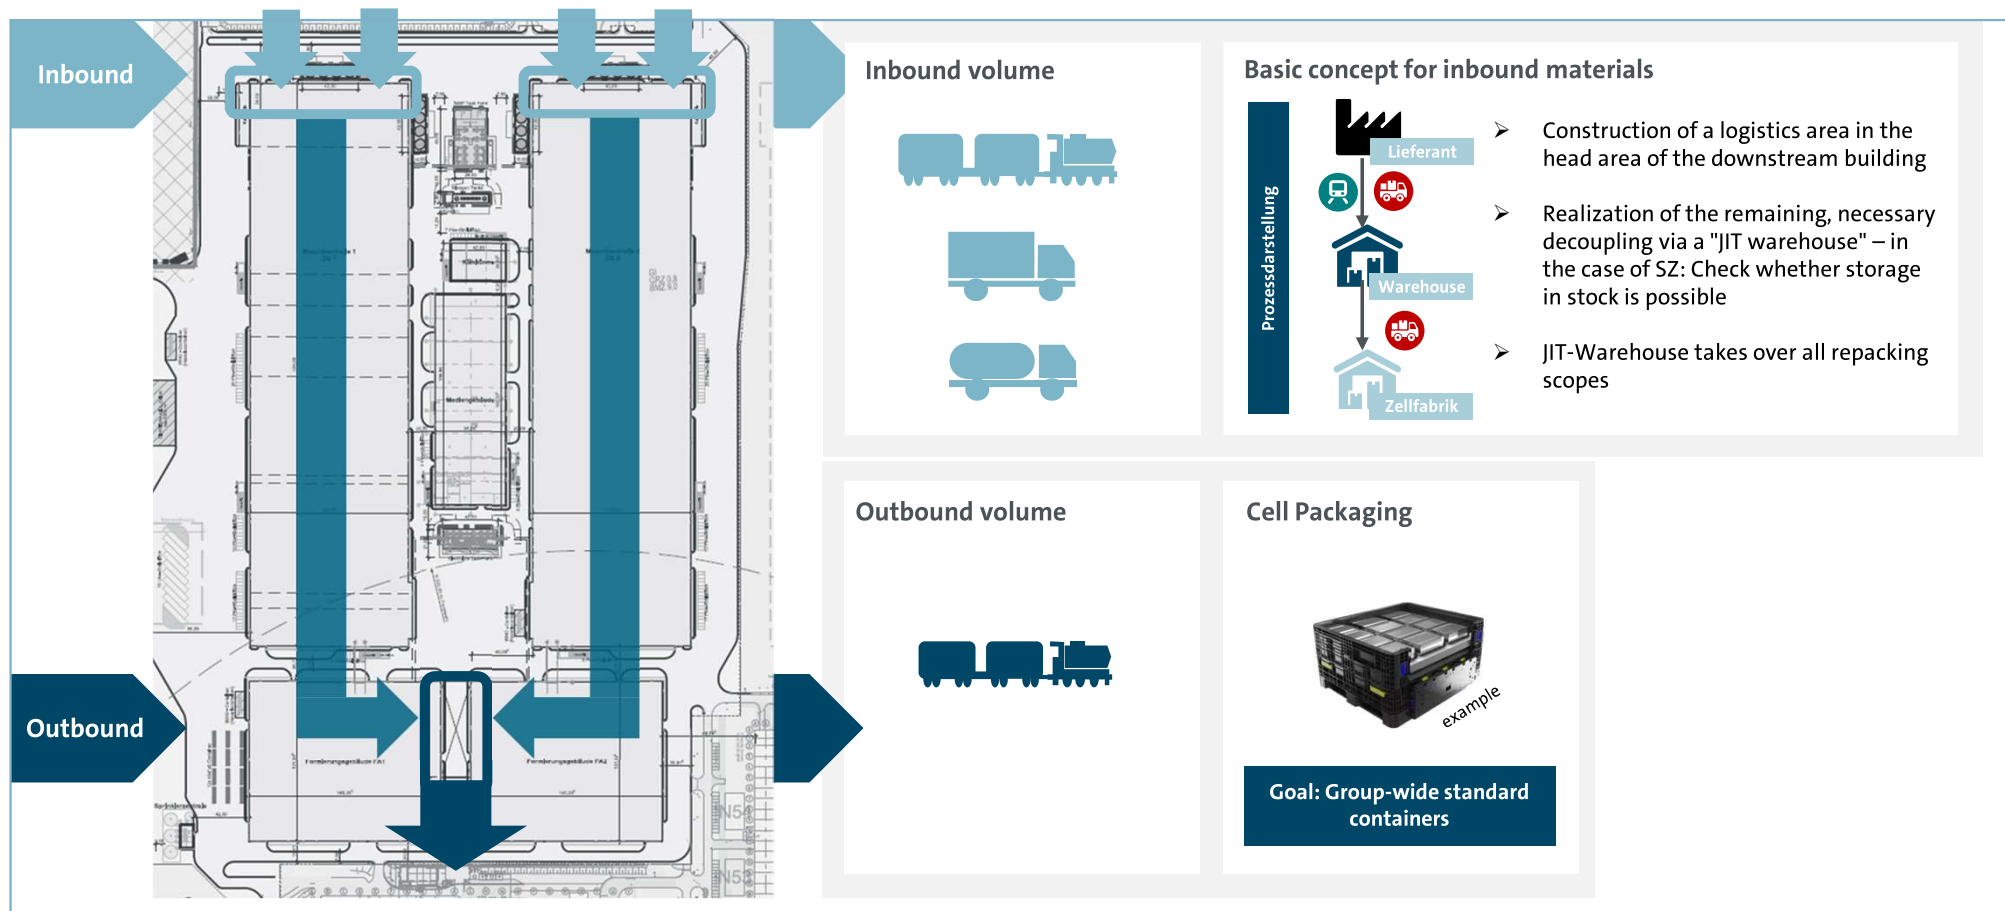

7. How we face those challenges: The Standard factory concept

General Layout informations

9. How we face those challenges: The Standard factory concept

Focus logistics
